

React Developer Hiring Assignment

Problem Statement:

In this assignment, you will create a web application for showcasing a list of courses and their details using React. Your task is to implement the course listing page, a course details page, and a student dashboard to display enrolled courses. Additionally, you may attempt bonus tasks marked with 🎁 for showcasing proficiency.

Requirements:

Course Listing: Create a page to showcase list of courses

- 1) Fetch a list of sample courses (use a dummy api or readymade backends like firebase).
- 2) Display the courses in a scrollable list with basic information and enable searching based on course name and instructor (e.g., course name, instructor, etc.).
- 3) Users should be able to click on a course to view its details.

Course Details Screen: Create a new screen that displays detailed information about a selected course. This screen should be accessible from the course listing screen.

Use the sample course model provided as a reference for the structure of course data.

Display Course Information:

Display the following course information on the details screen (as described in the previous assignment):

- 1) Course name
- 2) Instructor's name
- 3) Description
- 4) Enrollment status (e.g., 'Open', 'Closed', 'In Progress')
- 5) Course duration
- 6) Schedule
- 7) Location
- 8) Pre-requisites
- 9) Syllabus as an expandable item

Student Dashboard:

- 1) Create a user dashboard for students to display the courses they are enrolled in. Include a user-friendly interface with a list of enrolled courses.
- 2) Display course name, instructor name, thumbnail, due date, and a progress bar.

- 3) Implement a feature that allows students to mark courses as completed.

Advanced State Management:

Utilize a state management library such as Redux or MobX to manage the application's state effectively.

Submission Guidelines:

- 1) Please submit your assignment as a GitHub repository. Include the code for the course listing page, course details page, student dashboard, and any related components or screens. Additionally, provide clear instructions on how to run your application.
- 2) Attach a demo video of the website.

Evaluation Criteria:

- 1) Correct implementation of the course listing page, course details page, and student dashboard.
- 2) Proper functionality for searching, and navigating between screens.
- 3) Proper data fetching and display.
- 4) Effective use of state management with Redux or MobX.
- 5) Responsive design that works well on different devices.
- 6) Note: You don't need to provide excessive focus on User interface design and visual appeal. You can choose a design of your choice and move forward with it. We are more interested in checking the quality of code and the functionality as you'll be working with skilled UI/UX resources in the future,

📺) Implement real time connection with api that shows the number of likes instantly in course listing page. Note that the feature to like a course is not necessary, you should be able to update data in the backend and it will show up instantly in the frontend.

Sample Course Model: A sample course model is attached for your reference. Make necessary changes if required.

```
const courseModel = {
  id: 1, // Unique identifier for the course
  name: 'Introduction to React Native',
  instructor: 'John Doe', // Name of the course instructor
  description: 'Learn the basics of React Native development and build your first mobile app.',
  enrollmentStatus: 'Open', // Can be 'Open', 'Closed', or 'In Progress'
```

```

    thumbnail: 'your.image.here', //Link to the course thumbnail
    duration: '8 weeks', // Duration of the course
    schedule: 'Tuesdays and Thursdays, 6:00 PM - 8:00 PM',
    location: 'Online',
    prerequisites: ['Basic JavaScript knowledge', 'Familiarity with
React'],
    syllabus: [
      {
        week: 1,
        topic: 'Introduction to React Native',
        content: 'Overview of React Native, setting up your
development environment.'
      },
      {
        week: 2,
        topic: 'Building Your First App',
        content: 'Creating a simple mobile app using React Native
components.'
      },
      // Additional weeks and topics...
    ],
    students: [
      {
        id: 101,
        name: 'Alice Johnson',
        email: 'alice@example.com',
      },
      {
        id: 102,
        name: 'Bob Smith',
        email: 'bob@example.com',
      },
      // Additional enrolled students...
    ],
  };

export default courseModel;

```

How to ask for a Referral

+

–Gaurav Pandey

Just Follow this for next 30 days...

Gaurav Pandey

Do not apply on the company's website....

Gaurav Pandey

Get employee referrals..

Gaurav Pandey

Don't apply on the website straight away.

First, find the person who will submit a referral for you.

How does this work?

- The employee submits the referral for you.
- The recruiter receives a notification about your referral. Because your application is not from the website like tens of thousands of other applications, the recruiter actually looks through and reads your CV. Humans, not machines.
- If your CV meets the job posting requirements, the recruiter will schedule a screening call with you. If your CV doesn't fit the role, the recruiter will let you know. Although you still don't have guarantees to be invited for the interview, you have more chances to catch a recruiter's eye with a referral. With a referral, you are moving up through the screening threshold.

Gaurav Pandey

Who to ask for a job referral

Start with your close network and 1st-degree connections on LinkedIn...

Initially, we believed that it's not polite to ask for a referral straight away in the first message...

We thought we had to start the dialogue with small talk and after a few messages to mention "by the way" that we found a position we're interested in

That's not the worst scenario but if you already know what you want to ask this person for, make sure you respect their time and make your intent explicit from the beginning.

There is nothing wrong with asking for a referral straightaway if only you do it right and polite. Here is the message we used:

Gaurav Pandey

Examples

Hi [REDACTED],

Hope all is well with you! I came across the role of Inbound Marketing Manager at [REDACTED] and am interested in applying. Would you be open to submitting a referral for me to go with my application?

Happy to chat more or have a quick call if you have the time as well!

Cheers,
Yuliana

Gaurav Pandey

Hi Yuliana,

Thank you for reaching out! Yes happy to chat over the role and the company if you like? Do you know [REDACTED]? You could send me your Cv and if you like we can chat over the phone after? My email is [REDACTED]

Have a lovely weekend!

Gaurav Pandey

This "We're hiring!" thing might not be that popular among all tech companies you're considering. Once you're done with this list well, it's time to try reaching out to other people, neither "we're hiring" nor your connections.
